# Sounds Like Life...

*Don't blink or you'll miss it. That pretty much describes the advances which have taken place in the world of audio and video. You can now download songs to your computers and MP3 players, pick up a video at fast food restaurant, have DVDs mailed to you and even start and stop television programming to meet your schedule.*

*Now that your options in audio and video content have increased, take full advantage of them by adding a Destination Audio Multi-Room Audio System and Home Theater to your home. Destination Audio's Multi-Room Audio System allows you to share your favorite music throughout your home. As for Destination Audio's Home Theater Systems, there is still something to be said for gathering family and friends and enjoying a good movie.*

## Multi-Room Audio

Also known as distributed audio, Multi-Room Audio allows you to listen to your favorite music in almost any room of your home. Additionally, Multi-Room Audio systems eliminate the need to purchase stereo systems or boom boxes for each room. A central audio rack (or closet) holds a variety of audio sources (CD player, tuners, satellite radio, media servers, etc.) and distributes the music from those audio sources to different rooms in the home. Keypads in the room allow the listener to choose which source they want to listen to in each room. Additionally, remote controls can be used to control the source as well (track forward, change radio station, volume, etc...).

## Home Theater

Home Theaters have been a fixture in homes for the last decade. However, improvements in home theater processors, amplifiers and speakers have made home theater systems easier to use and more affordable. Destination Audio offers a variety of Home Theater Packages. These include in-wall, in-ceiling and freestanding Home Theater Packages that have been configured to provide the best performance and sound. Imagine the sensation of hearing the bullet fly over your head or feeling the ground rumble when a dinosaur approaches. This is what the movie producers want you to hear and feel.

***Destination Audio manufactures high quality in-wall, in-ceiling, and freestanding speakers along with the associated electronics.***

## Outdoor Audio

withstand UV rays, humidity, moisture, dust and wind.

Add more life to the party with outdoor audio. Destination Audio offers specially designed weather resistant speakers which can be mounted on the back patio, by the barbecue, the pool or anywhere else you want your music. If space is limited, Destination Audio offers a single point stereo outdoor speaker. This allows you to have stereo sound from a single speaker in a single weather resistant cabinet. All of Destination Audio's outdoor speakers are designed to

## Electronics

Now days, you do not even have to leave your house to get your music and videos. You can download music and videos to your computer and MP3 player and have DVDs mailed to you. A Multi-Room Audio System and Home Theater System from Destination Audio is the perfect way to share and enjoy your favorite music and videos. But all the bells and whistles don't mean a thing if you can't control your system...right? Not to worry, Destination Audio's volume controls and keypads are easy to use and understand.

## Pre-Configured Packages

Destination Audio has put together several pre-configured packages for both Multi-Room Audio and Home Theater. These packages are designed for optimum performance and can meet a variety of budgets and needs. Ask your Dealer for more information on these packages.

***Destination Audio offers a full line of Multi-room Audio, Outdoor Audio and Home Theater products.***
